Project Name	Medical Diagnosis Center
Maximum Marks	4 Marks

Solution Architecture:

The Medical Diagnosis Center is a ServiceNow-based application designed to simplify patient registration, diagnostic test booking, appointment scheduling, and report tracking. It helps patients book tests easily and enables staff to manage appointments efficiently.

The system uses the ServiceNow Service Portal to provide a user-friendly interface. Patient details, test information, appointment schedules, and report status are maintained securely. Automated notifications are sent for booking confirmations and appointment reminders.

The proposed solution reduces manual work, minimizes delays, improves communication, and increases patient satisfaction. Role-based access helps protect patient information.
